PROJECT DESCRIPTION

The intention was to test SUPER THERM in comparison to normal white paints on gas pipes that are not allowed to become warm in order to avoid build-up of pressure. Currently, in warm weather conditions it could be necessary to cool off the installation with water see sprinkler installations in the pictures.

COATING SOLUTION

RUST GRIP was used as a primer and then 2 layers of SUPER THERM were applied. Finished off with ENAMO GRIP WHITE to give extra protection in this industrial environment.

RESULTS

Results have been confirmed as being highly satisfactory.
