

CONTAINER HOME – ARIZONA

PRIVATE HOME

- Markets: Housing & Renovation
- Country: USA
- Courtesy of: Superior Products International

PROJECT DESCRIPTION

“This 2,000ft² family-house in Flagstaff, Arizona is constructed from six recycled shipping containers and includes 2 loft bedrooms, 2 baths, 2 office/studios, storage room, and a green-house/solarium. It received an award from the Coconino County Sustainable Building Program in 2010.

The inside walls and floor are insulated with closed-cell foam, and the ceilings with recycled denim. The exterior is coated with Super Therm ceramic coating, which reflects heat and cold, helps prevent condensation, and provides a durable finish.”

COATING SOLUTION

SUPER THERM was applied to container units to be used as accommodation. Application was done using the standard 400µ WFT/250µ DFT application thickness.
