PROJECT DESCRIPTION

Cement Silos were deteriorated and suffering from water penetration. Silo's needed to be made waterproof and further protected from the weather elements and the harsh Spanish sun.

COATING SOLUTION

Waterproofing was done through the application of a combined ENDUROOF solution in different layers. It is recommended, when applying ENDUROOF in multiple layers that different colors are used to ensure sufficient thickness of the layers over the total surface area. A further protection of SUPER THERM was added to ensure that silos were not suffering from the heat impact generated by the sun.

PRODUCTS WE USED

Super Therm®
Endu Products
