PROJECT DESCRIPTION

Surface: Stainless steel tank of digester

Purpose: Prevent heat losses by radiation to save energy

COATING SOLUTION

First the sander was cleaning and sanded. Thereafter HOT SURFACE COATING was applied in 2 layers (total thickness 3mm). When dry, the digester was sealed with ENAMO GRIP CLEAR for easy cleaning.

RESULTS

Initial surface temperature: 80°C

After 3mm HSC – surface temperature: 40°C

Reduced surface temperature by 50%
